Real Reviews, Real Trust

Case Study

The client needed a multi-app review management system. After 3–4 planning meetings, we prepared a detailed SRS and UML diagrams to align on goals.

This ensured a smooth build of the client app, business dashboard, and admin panel — delivering a reliable and scalable platform.

Technical Overview

Frontend Client

Next.js, React, TypeScript and
Tailwind CSS

Libraries

admin.trustsadvisor.com

Admin Dashboard

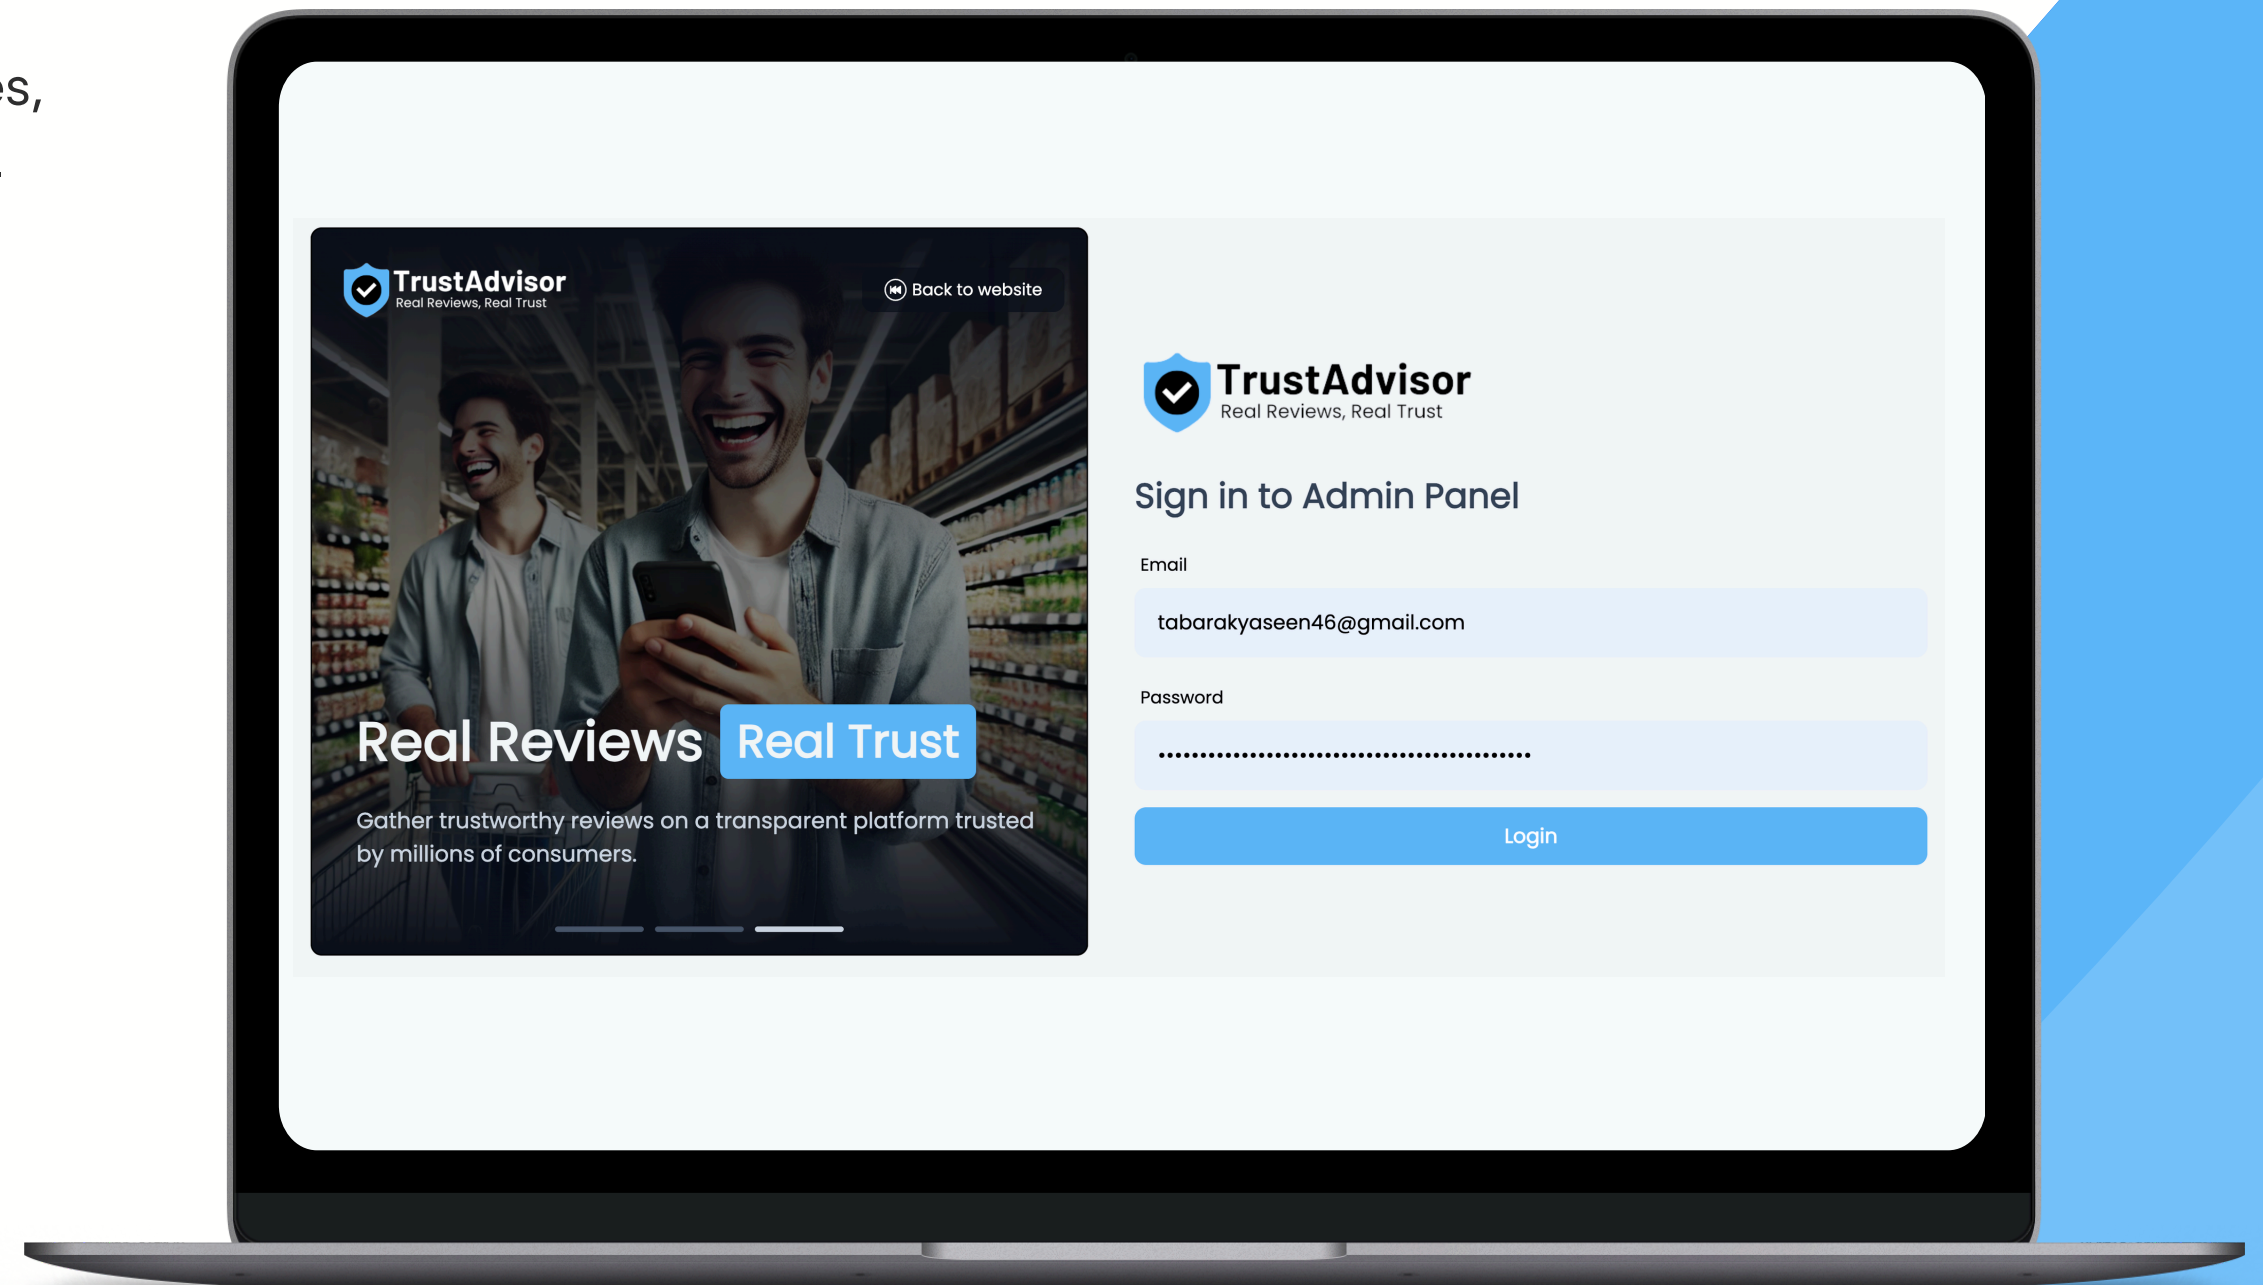

A super admin interface to manage all companies, oversee platform operations, and ensure system-wide security and quality.

Features

- Role based login with email authentication.
- System logs and data backup monitoring.
- Manage all registered businesses.
- Flag or remove fake/spam reviews.
- Send platform announcements and emails.
- Billing & subscription control.
- CMS Page and blogging management.
- Restful public APIs (token secured)

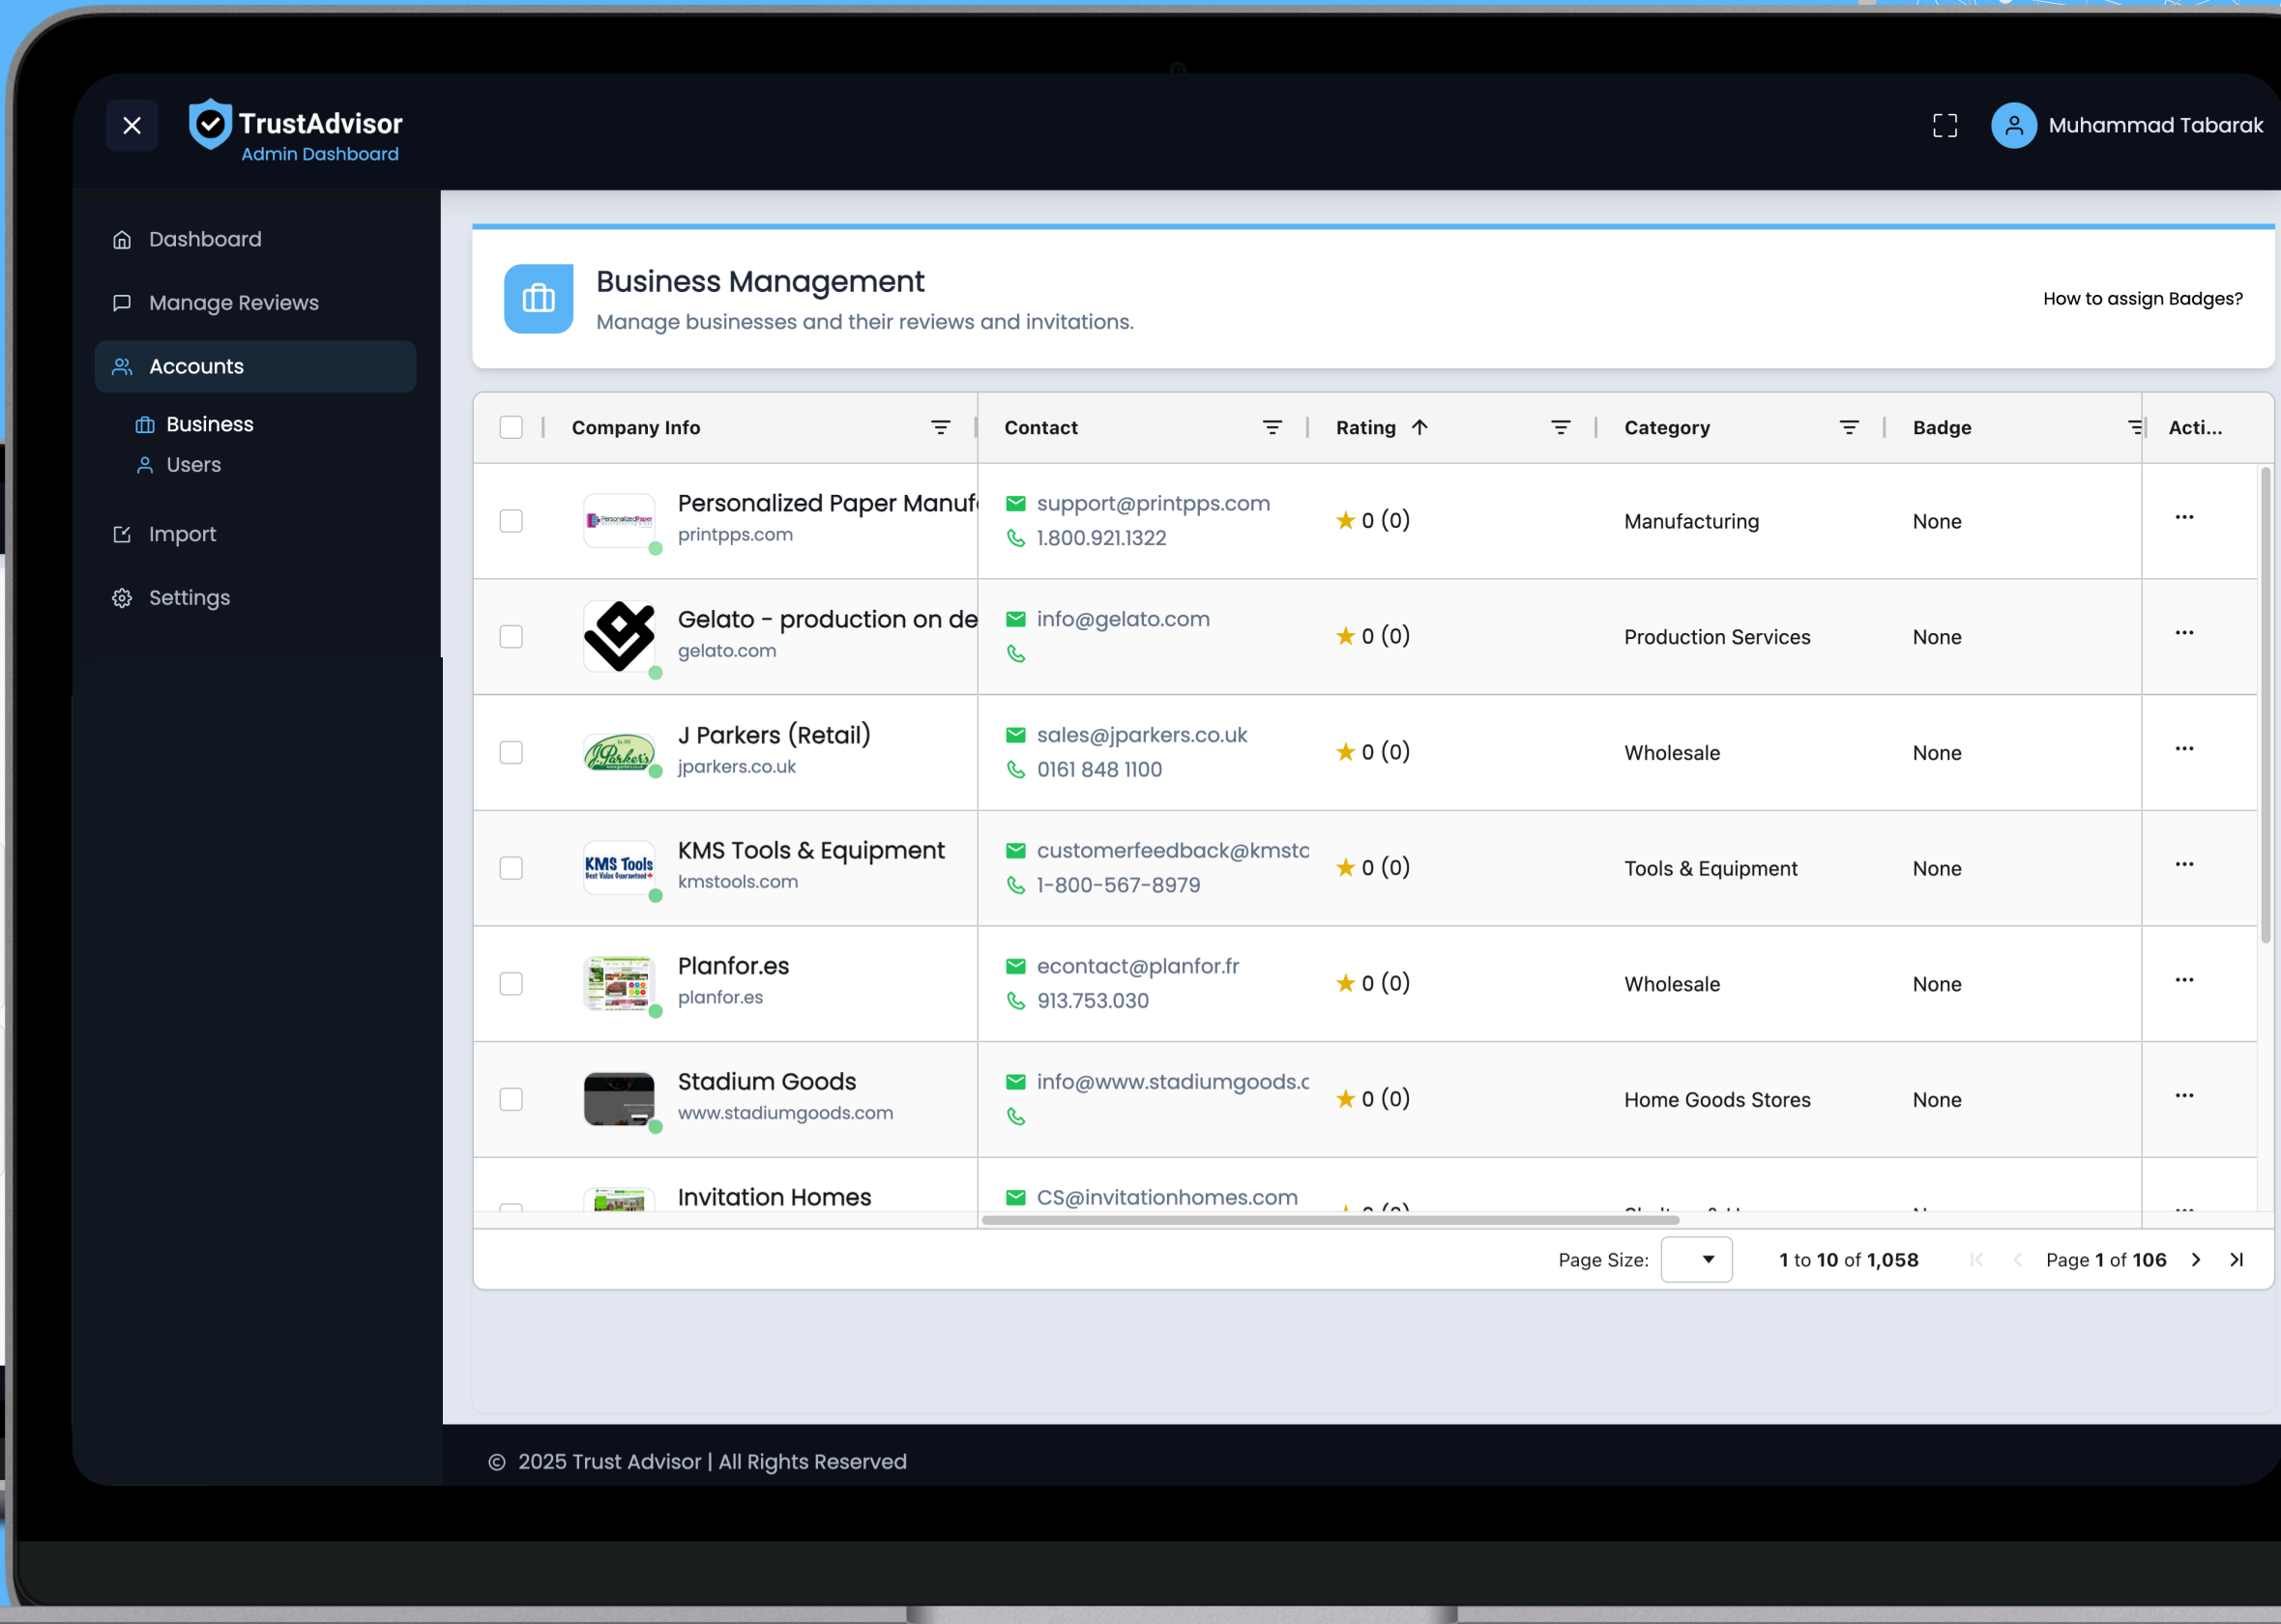

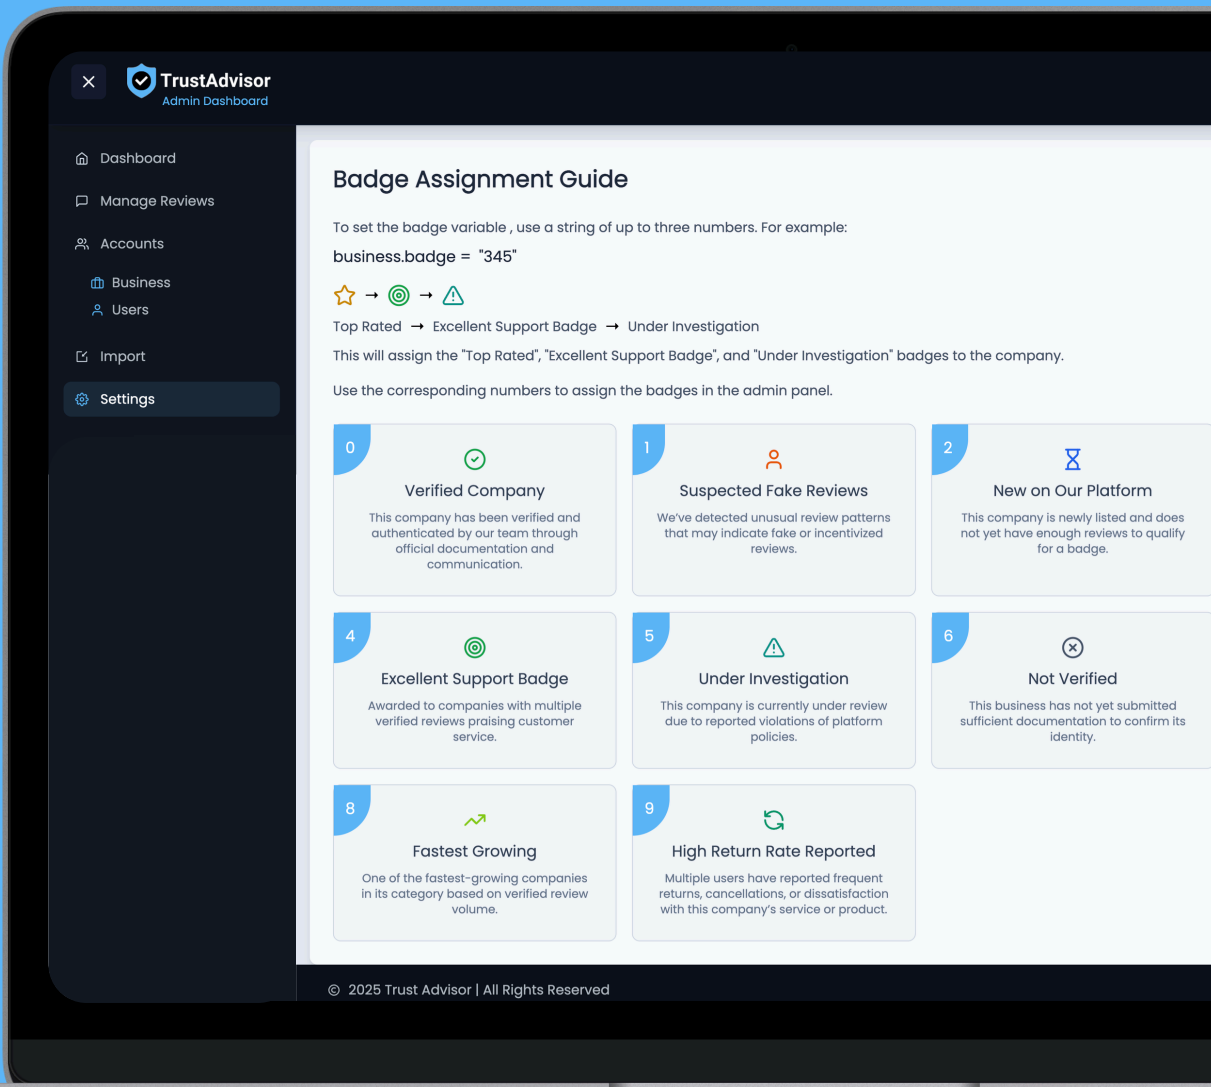

Tech Stack

- React js, Tailwind CSS, Headless UI
chosen for better management and easy future updation and better reuseability.

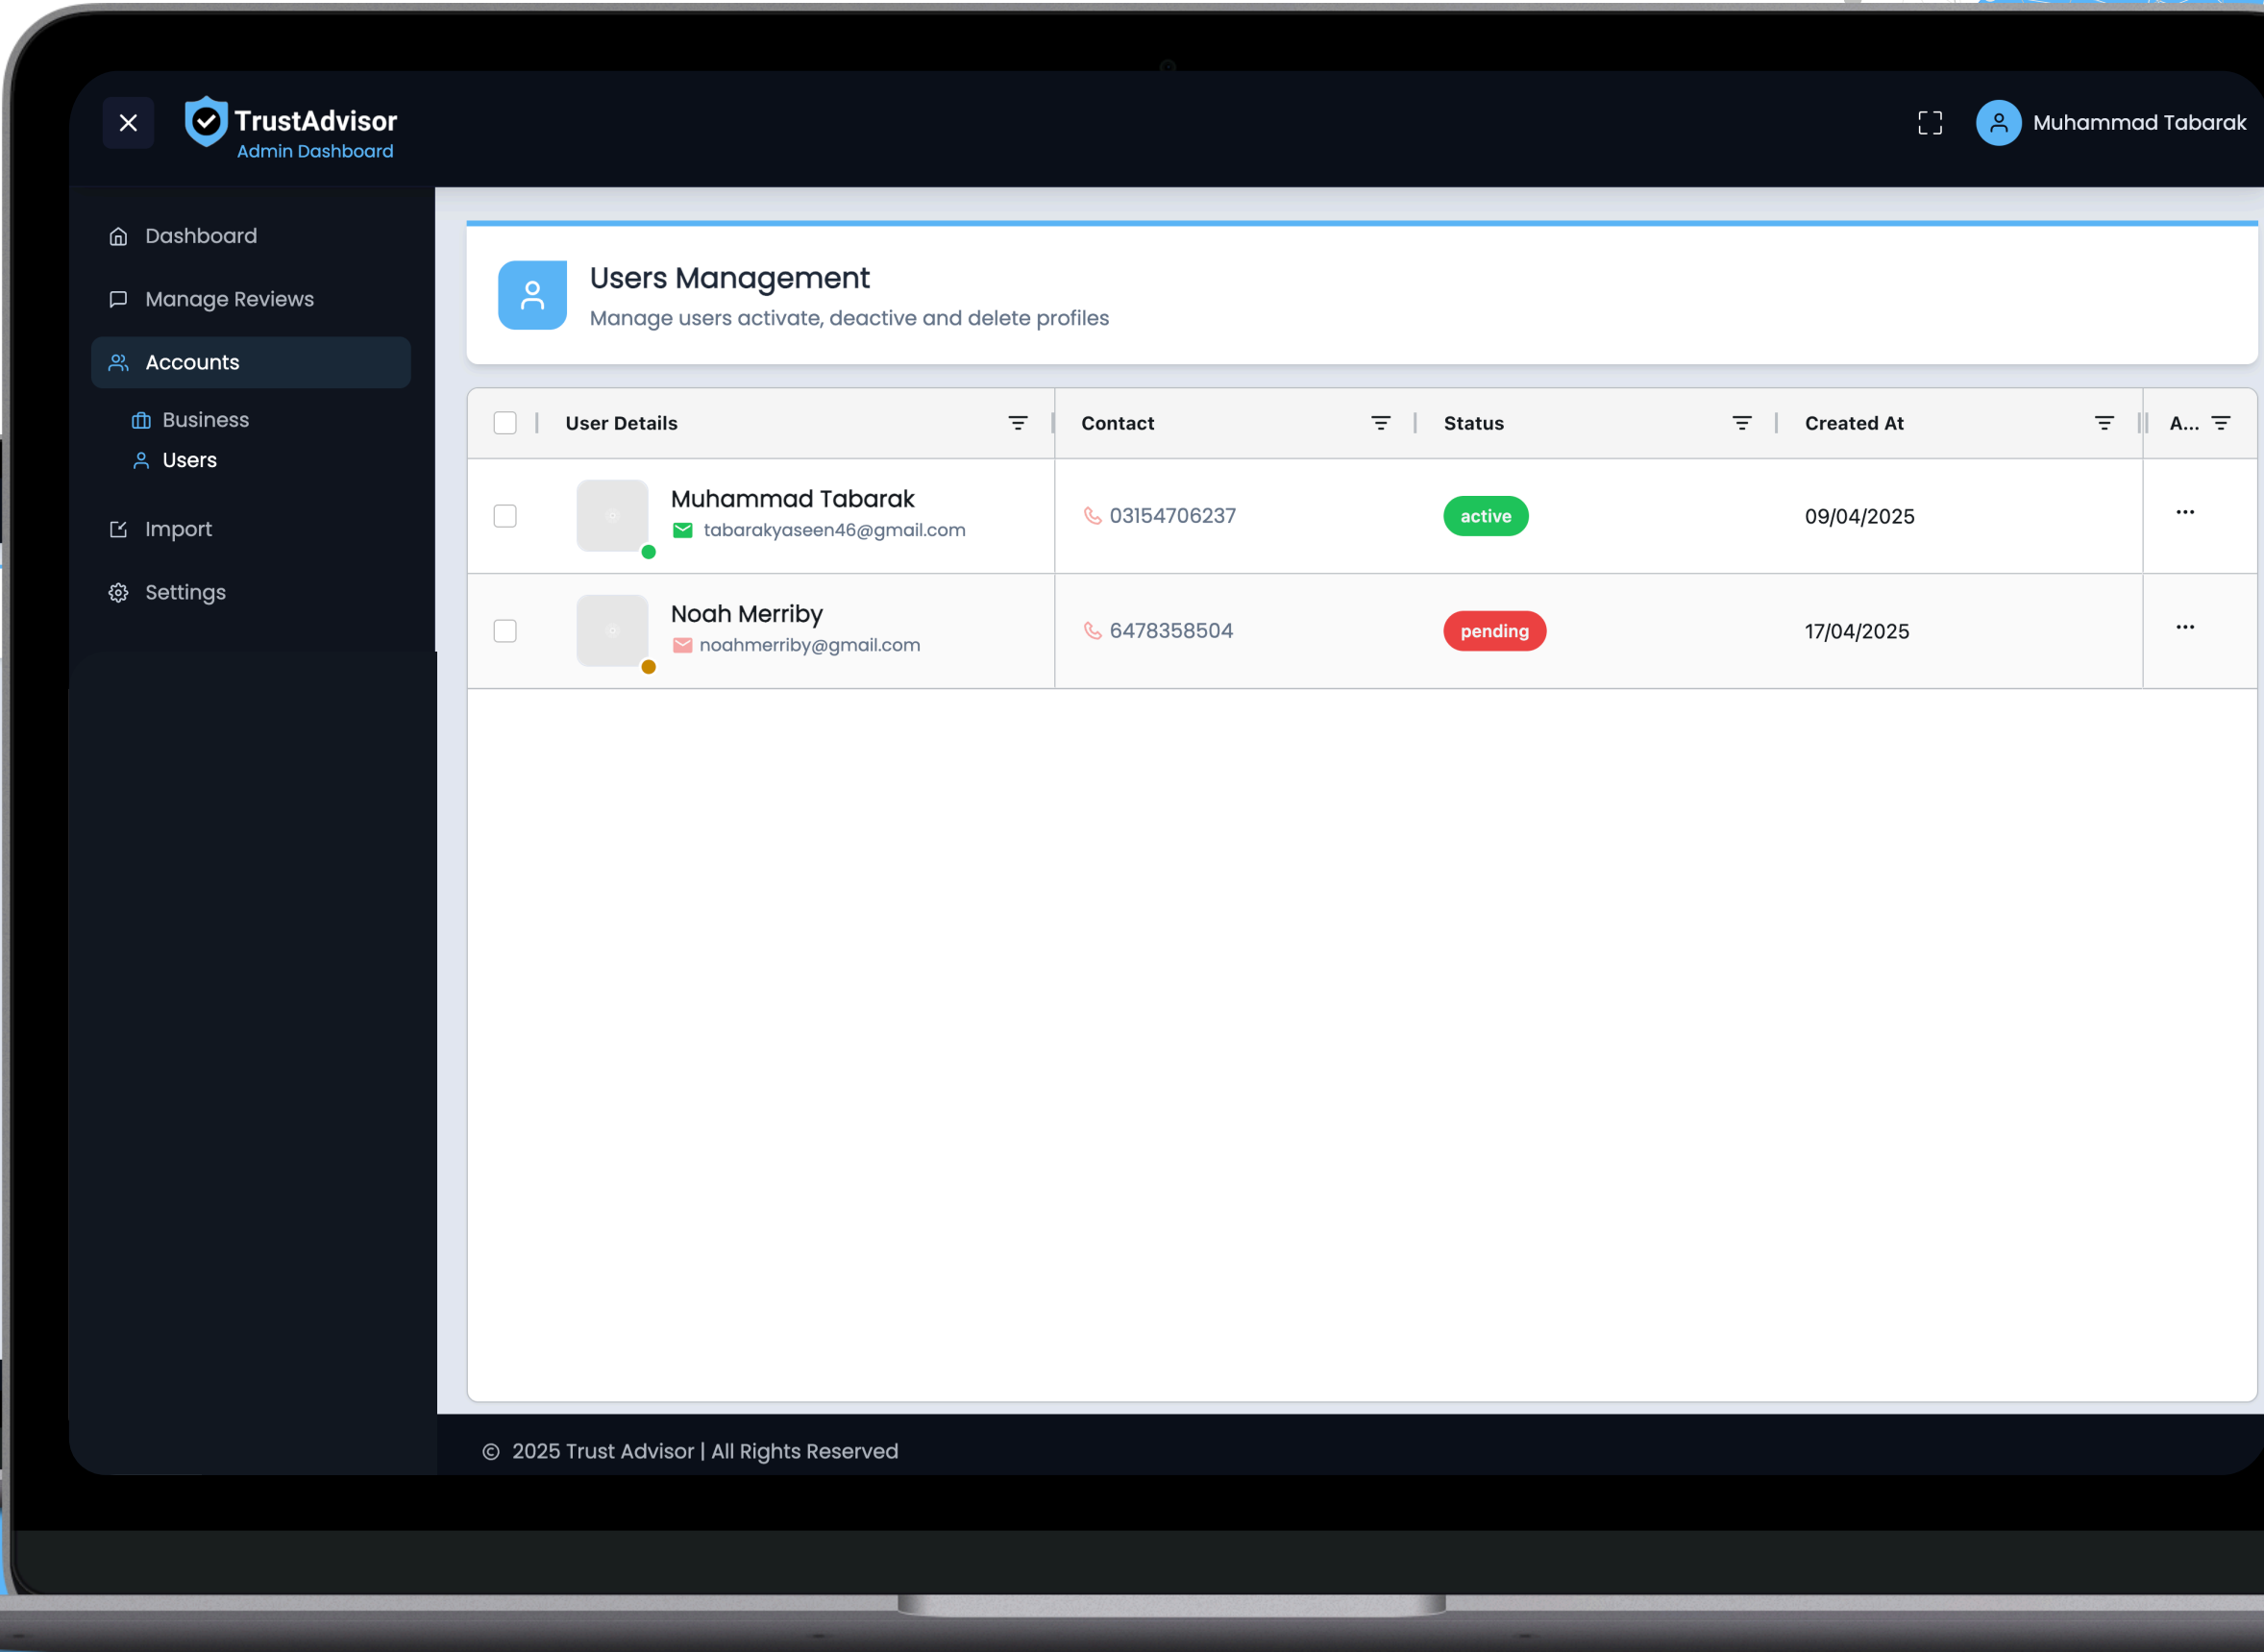

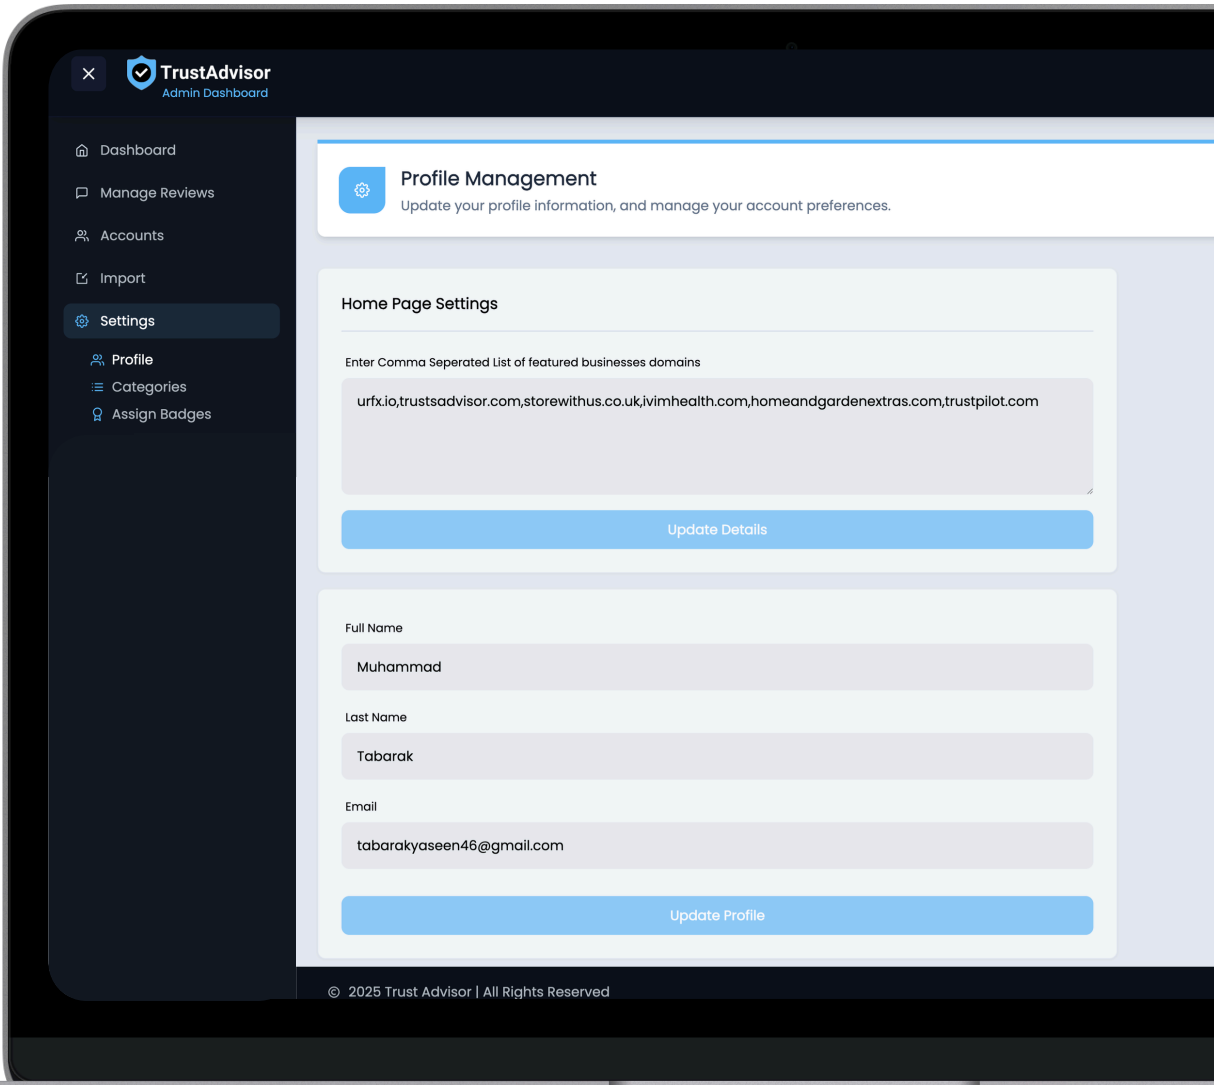

All Businesses Management

View, manage, approve, or deactivate business accounts registered on the platform. Admins can access business profiles, activity logs, assigned users, and usage statistics.

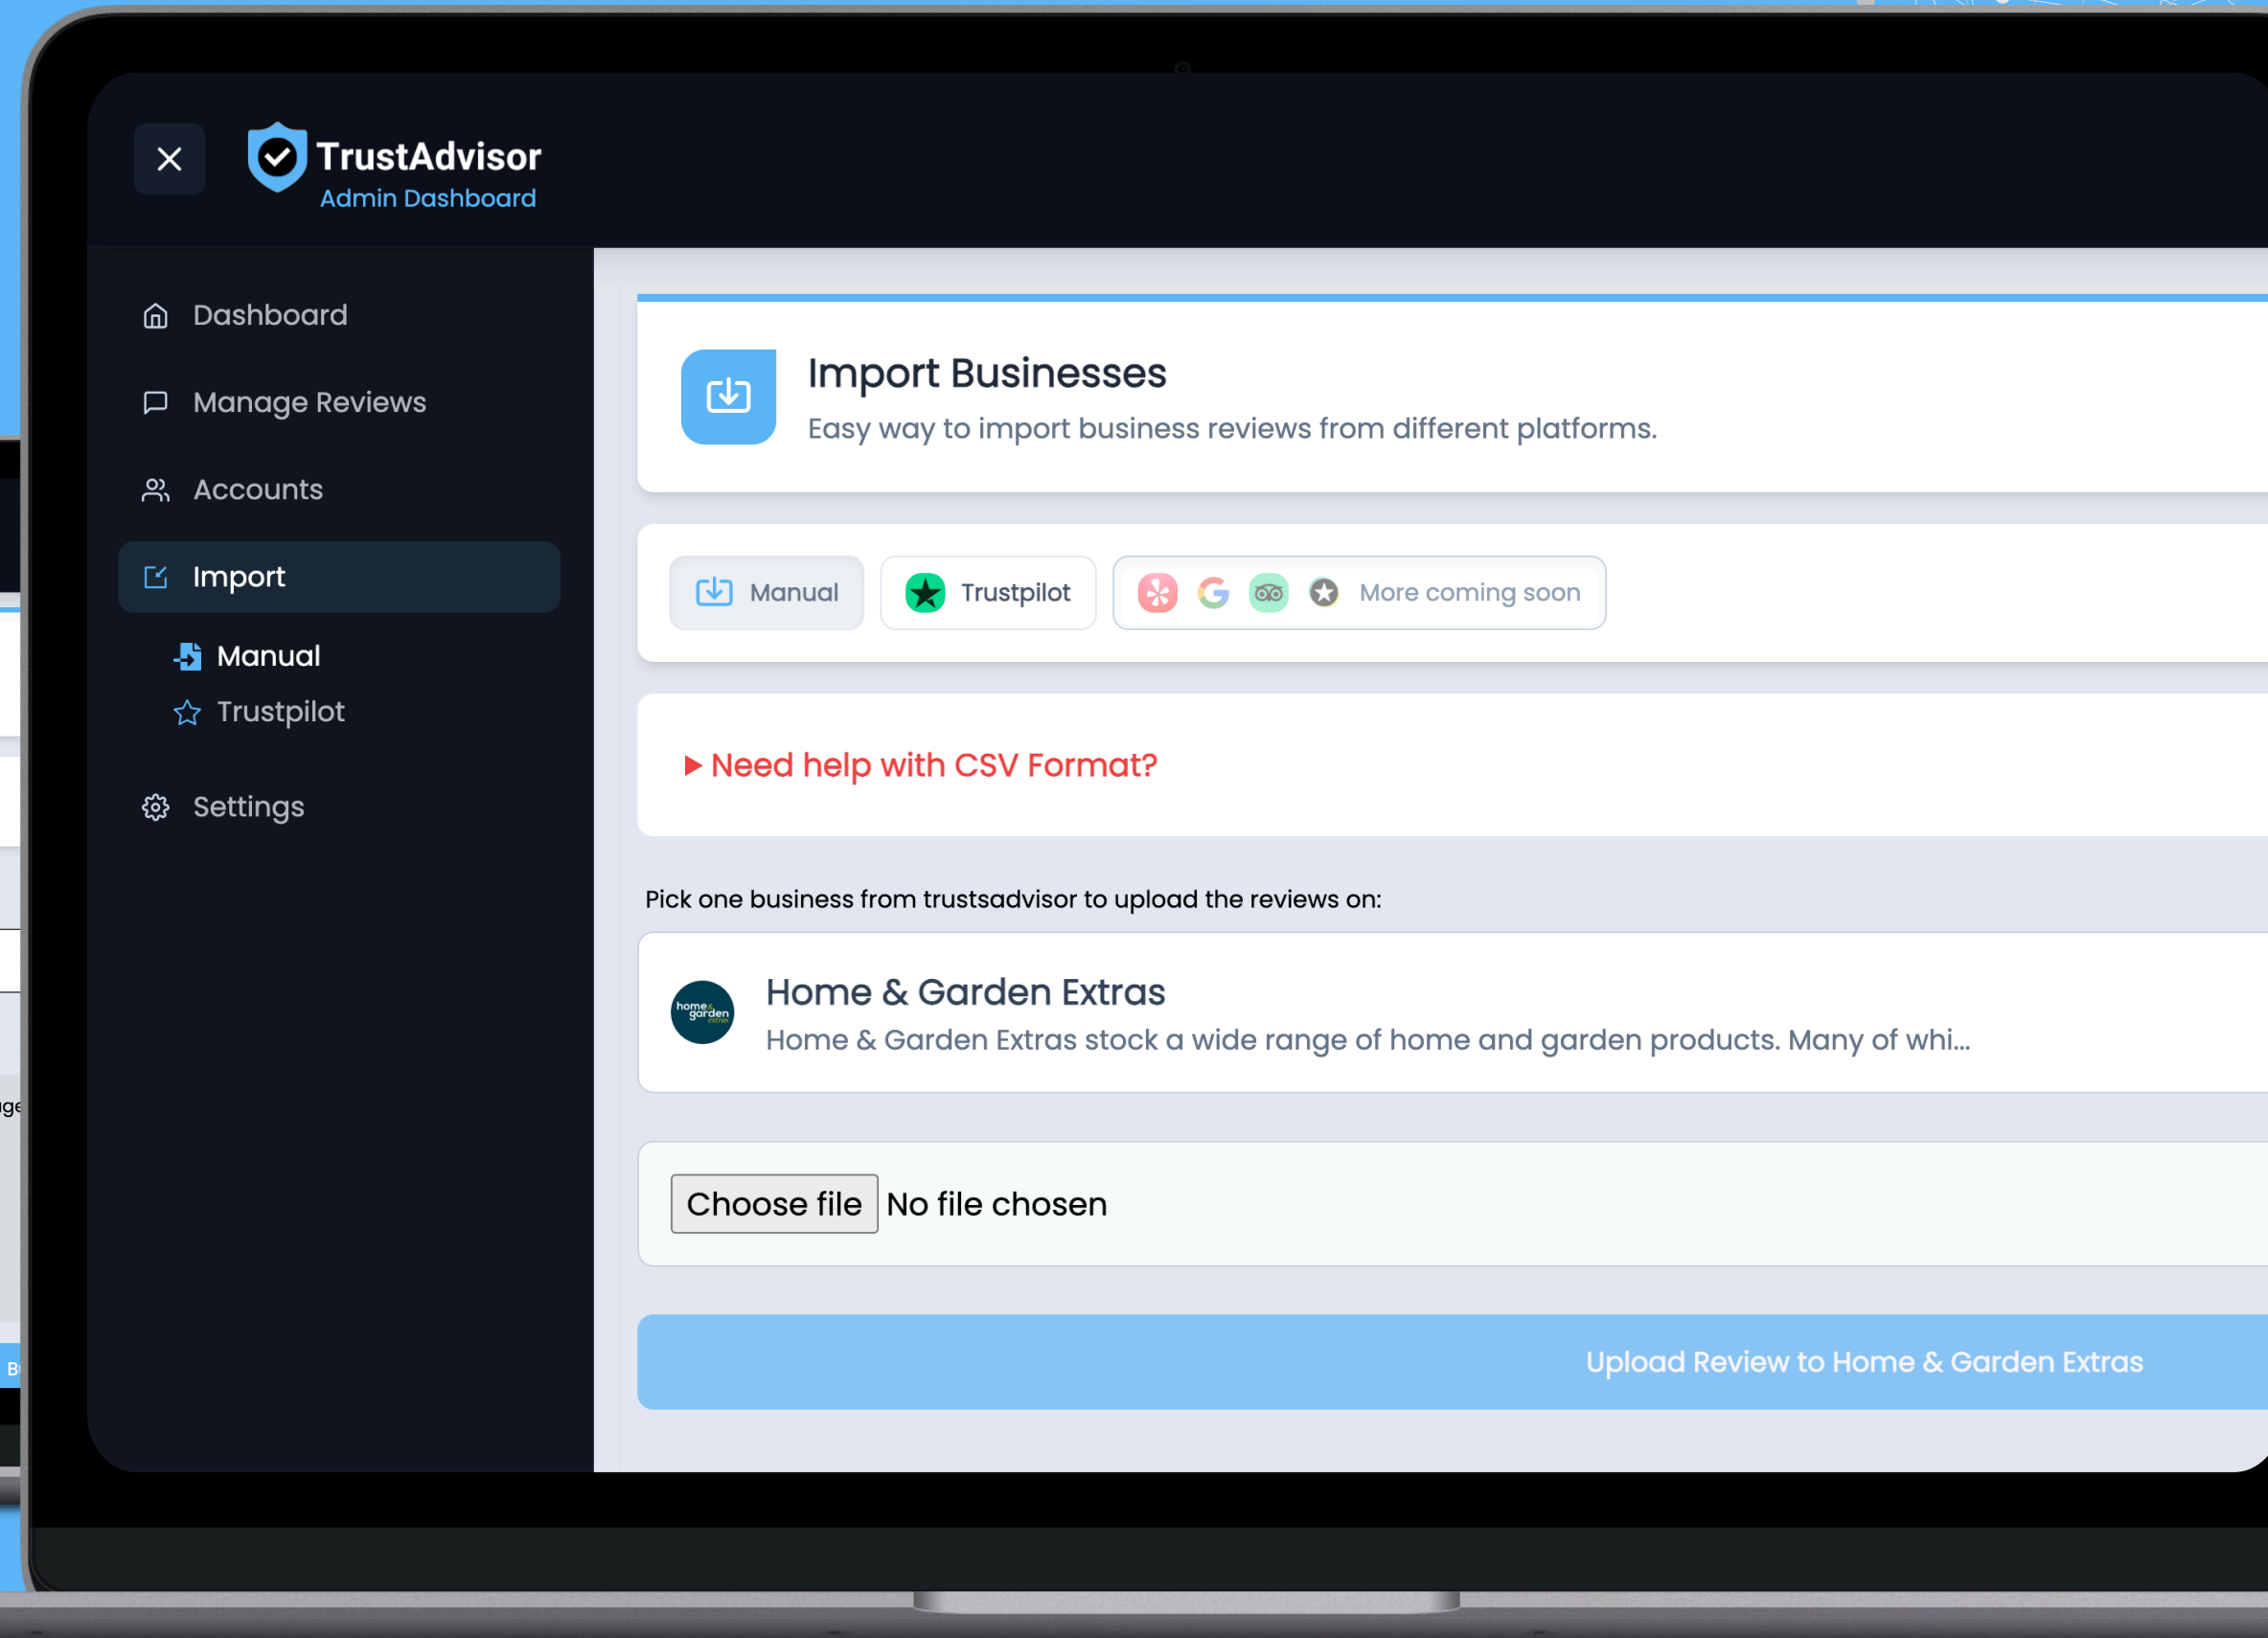

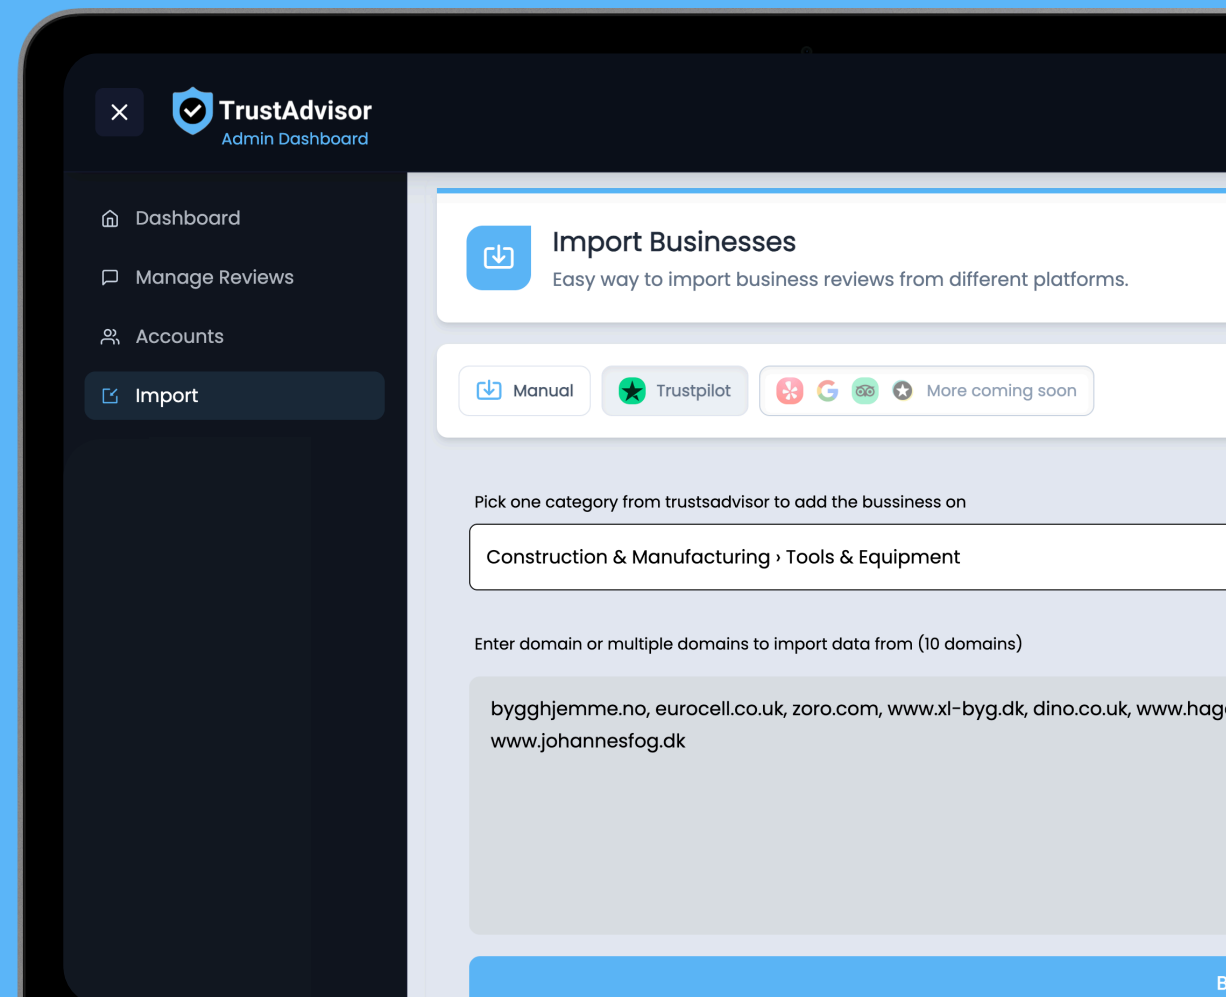

All Users Management

Manage all platform users including business owners, managers, and reviewers. Admins can edit user info, reset passwords, assign roles, or suspend accounts.

Business Bulk Import Managment

Easily import businesses and their reviews through manual CSV uploads or by connecting with Trustpilot. Auto-import support for more platforms like Google and Yelp is currently in progress to make onboarding even easier.

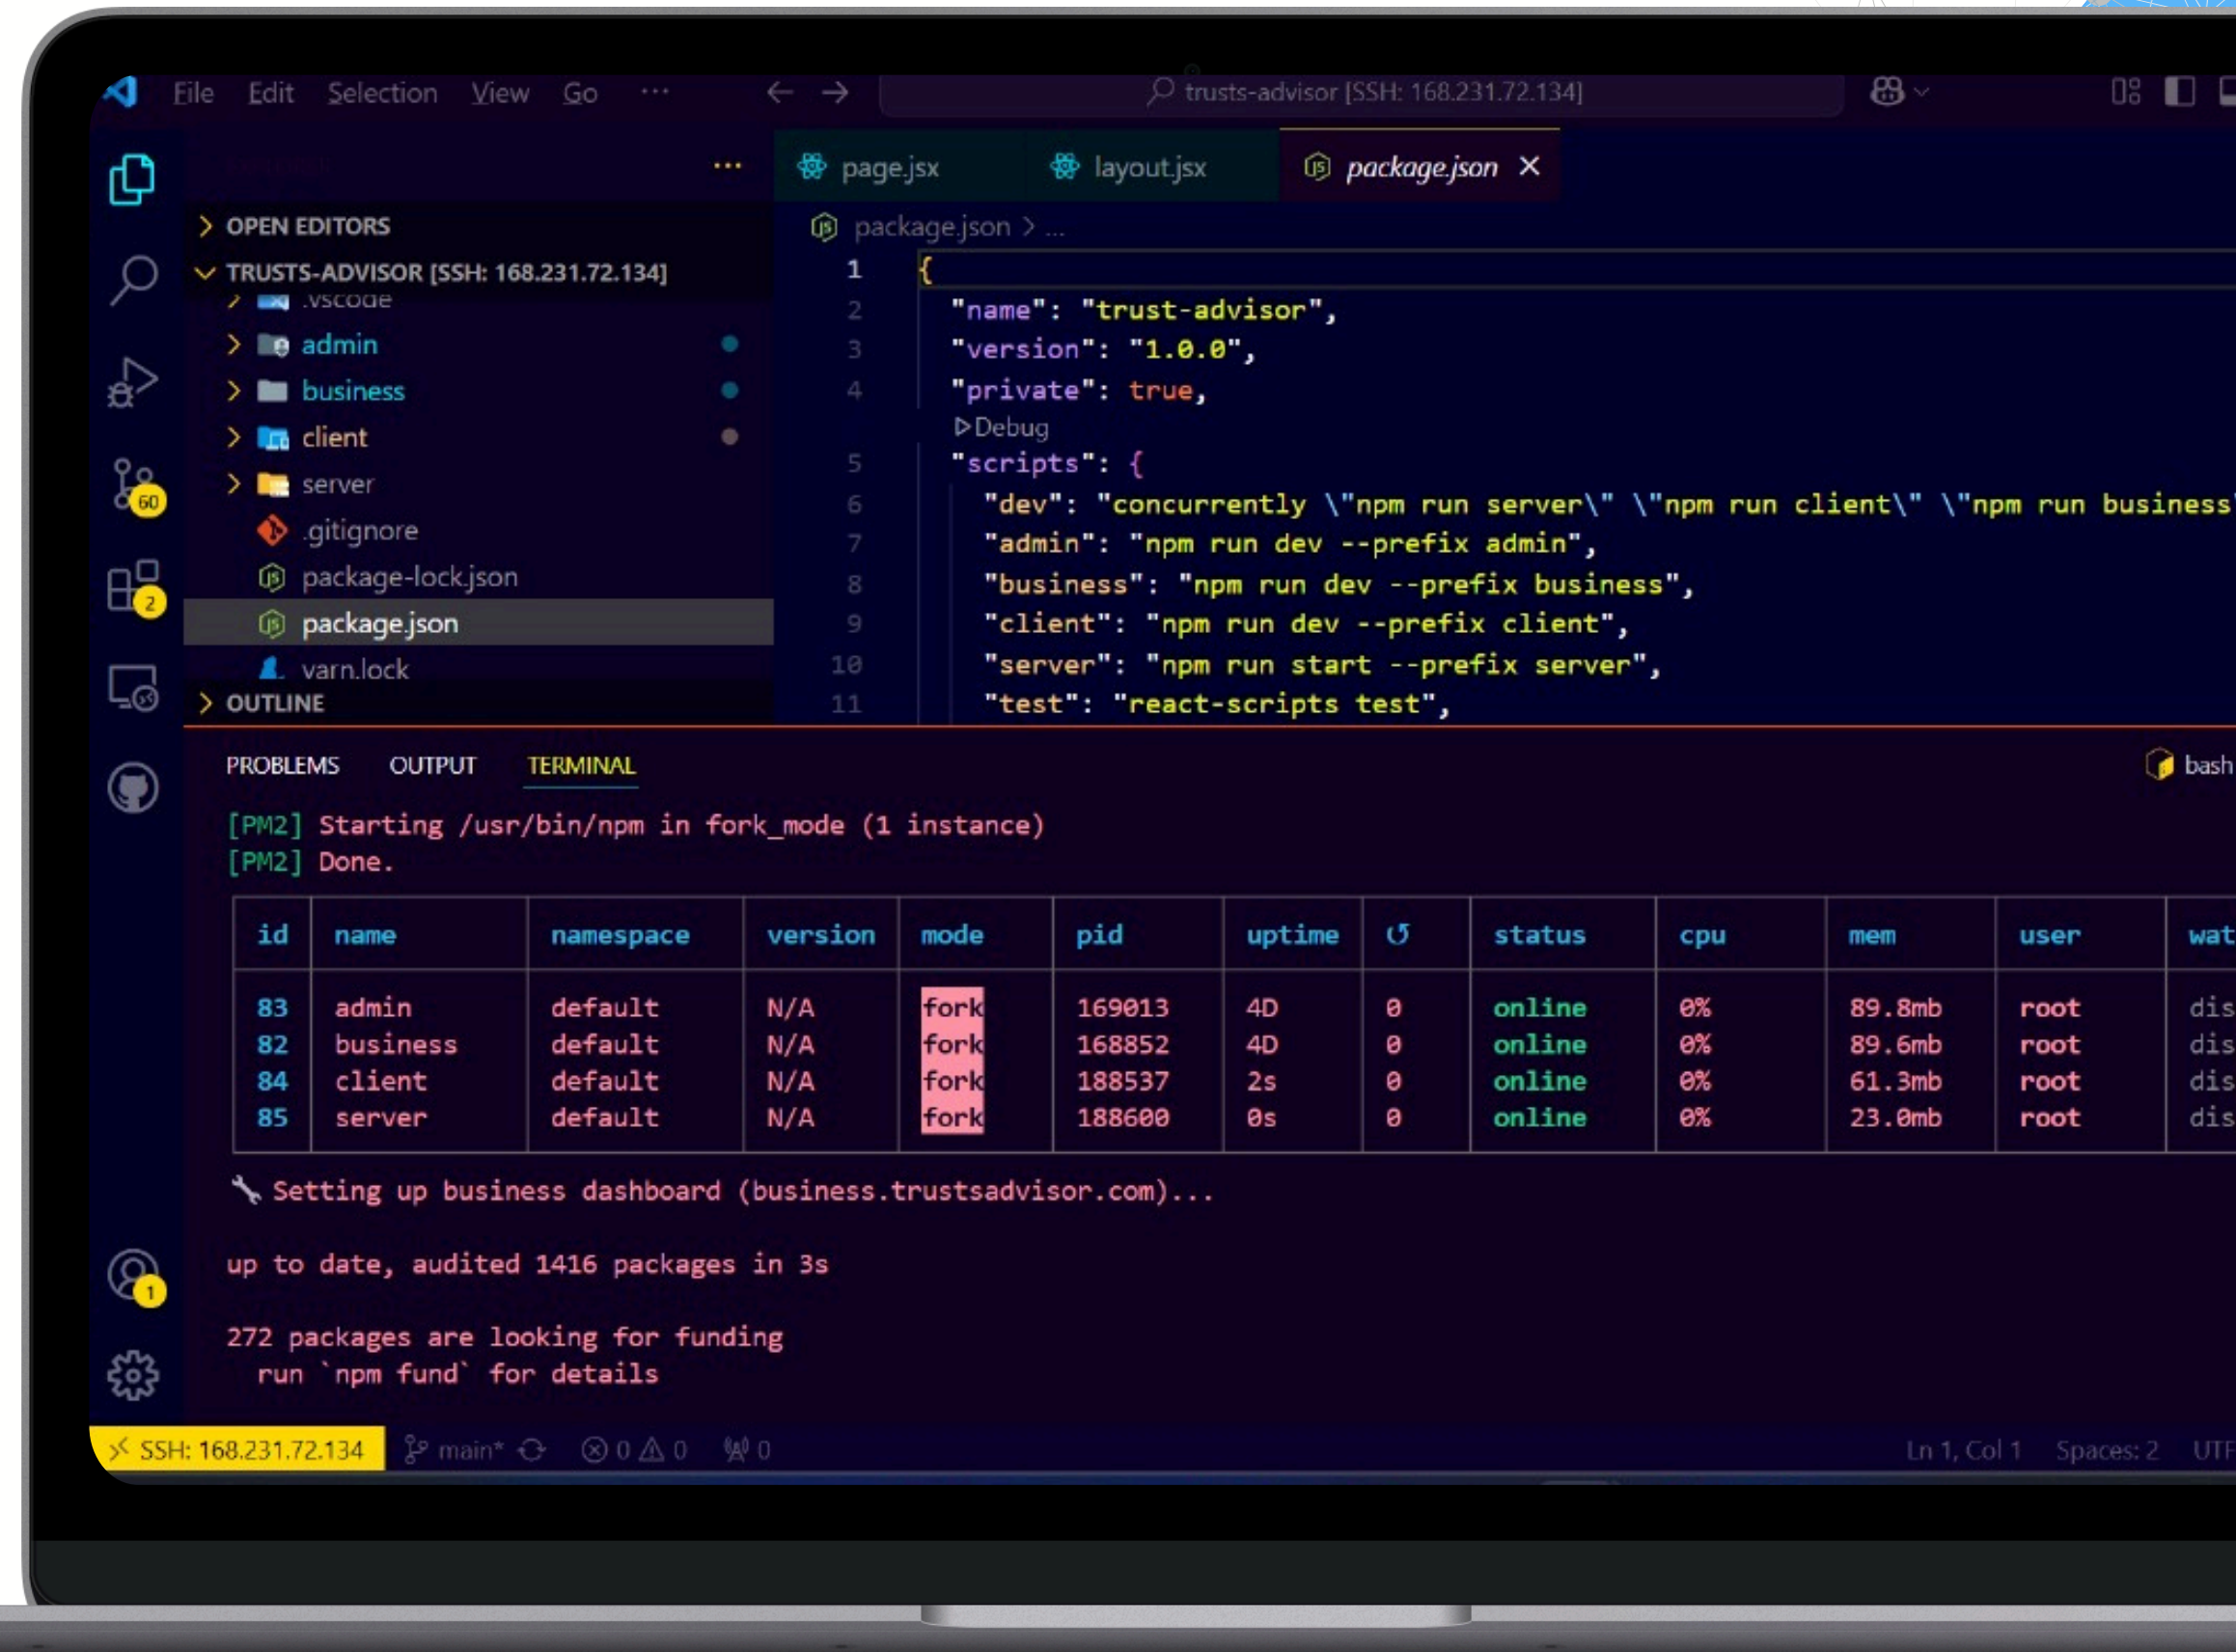

VPS Deployment

Checklist

- SSH setup for private GitHub access
- Process management with PM2
- Nginx reverse proxy for domains/subdomains
- SSL setup with Let's Encrypt
- Automated deployment with bash script
- DNS pointing for multiple apps
- Production build & launch of full stack apps

● Deployment Expertise Summary

Ensures end-to-end deployment of full-stack apps with secure, scalable, and maintainable setups.

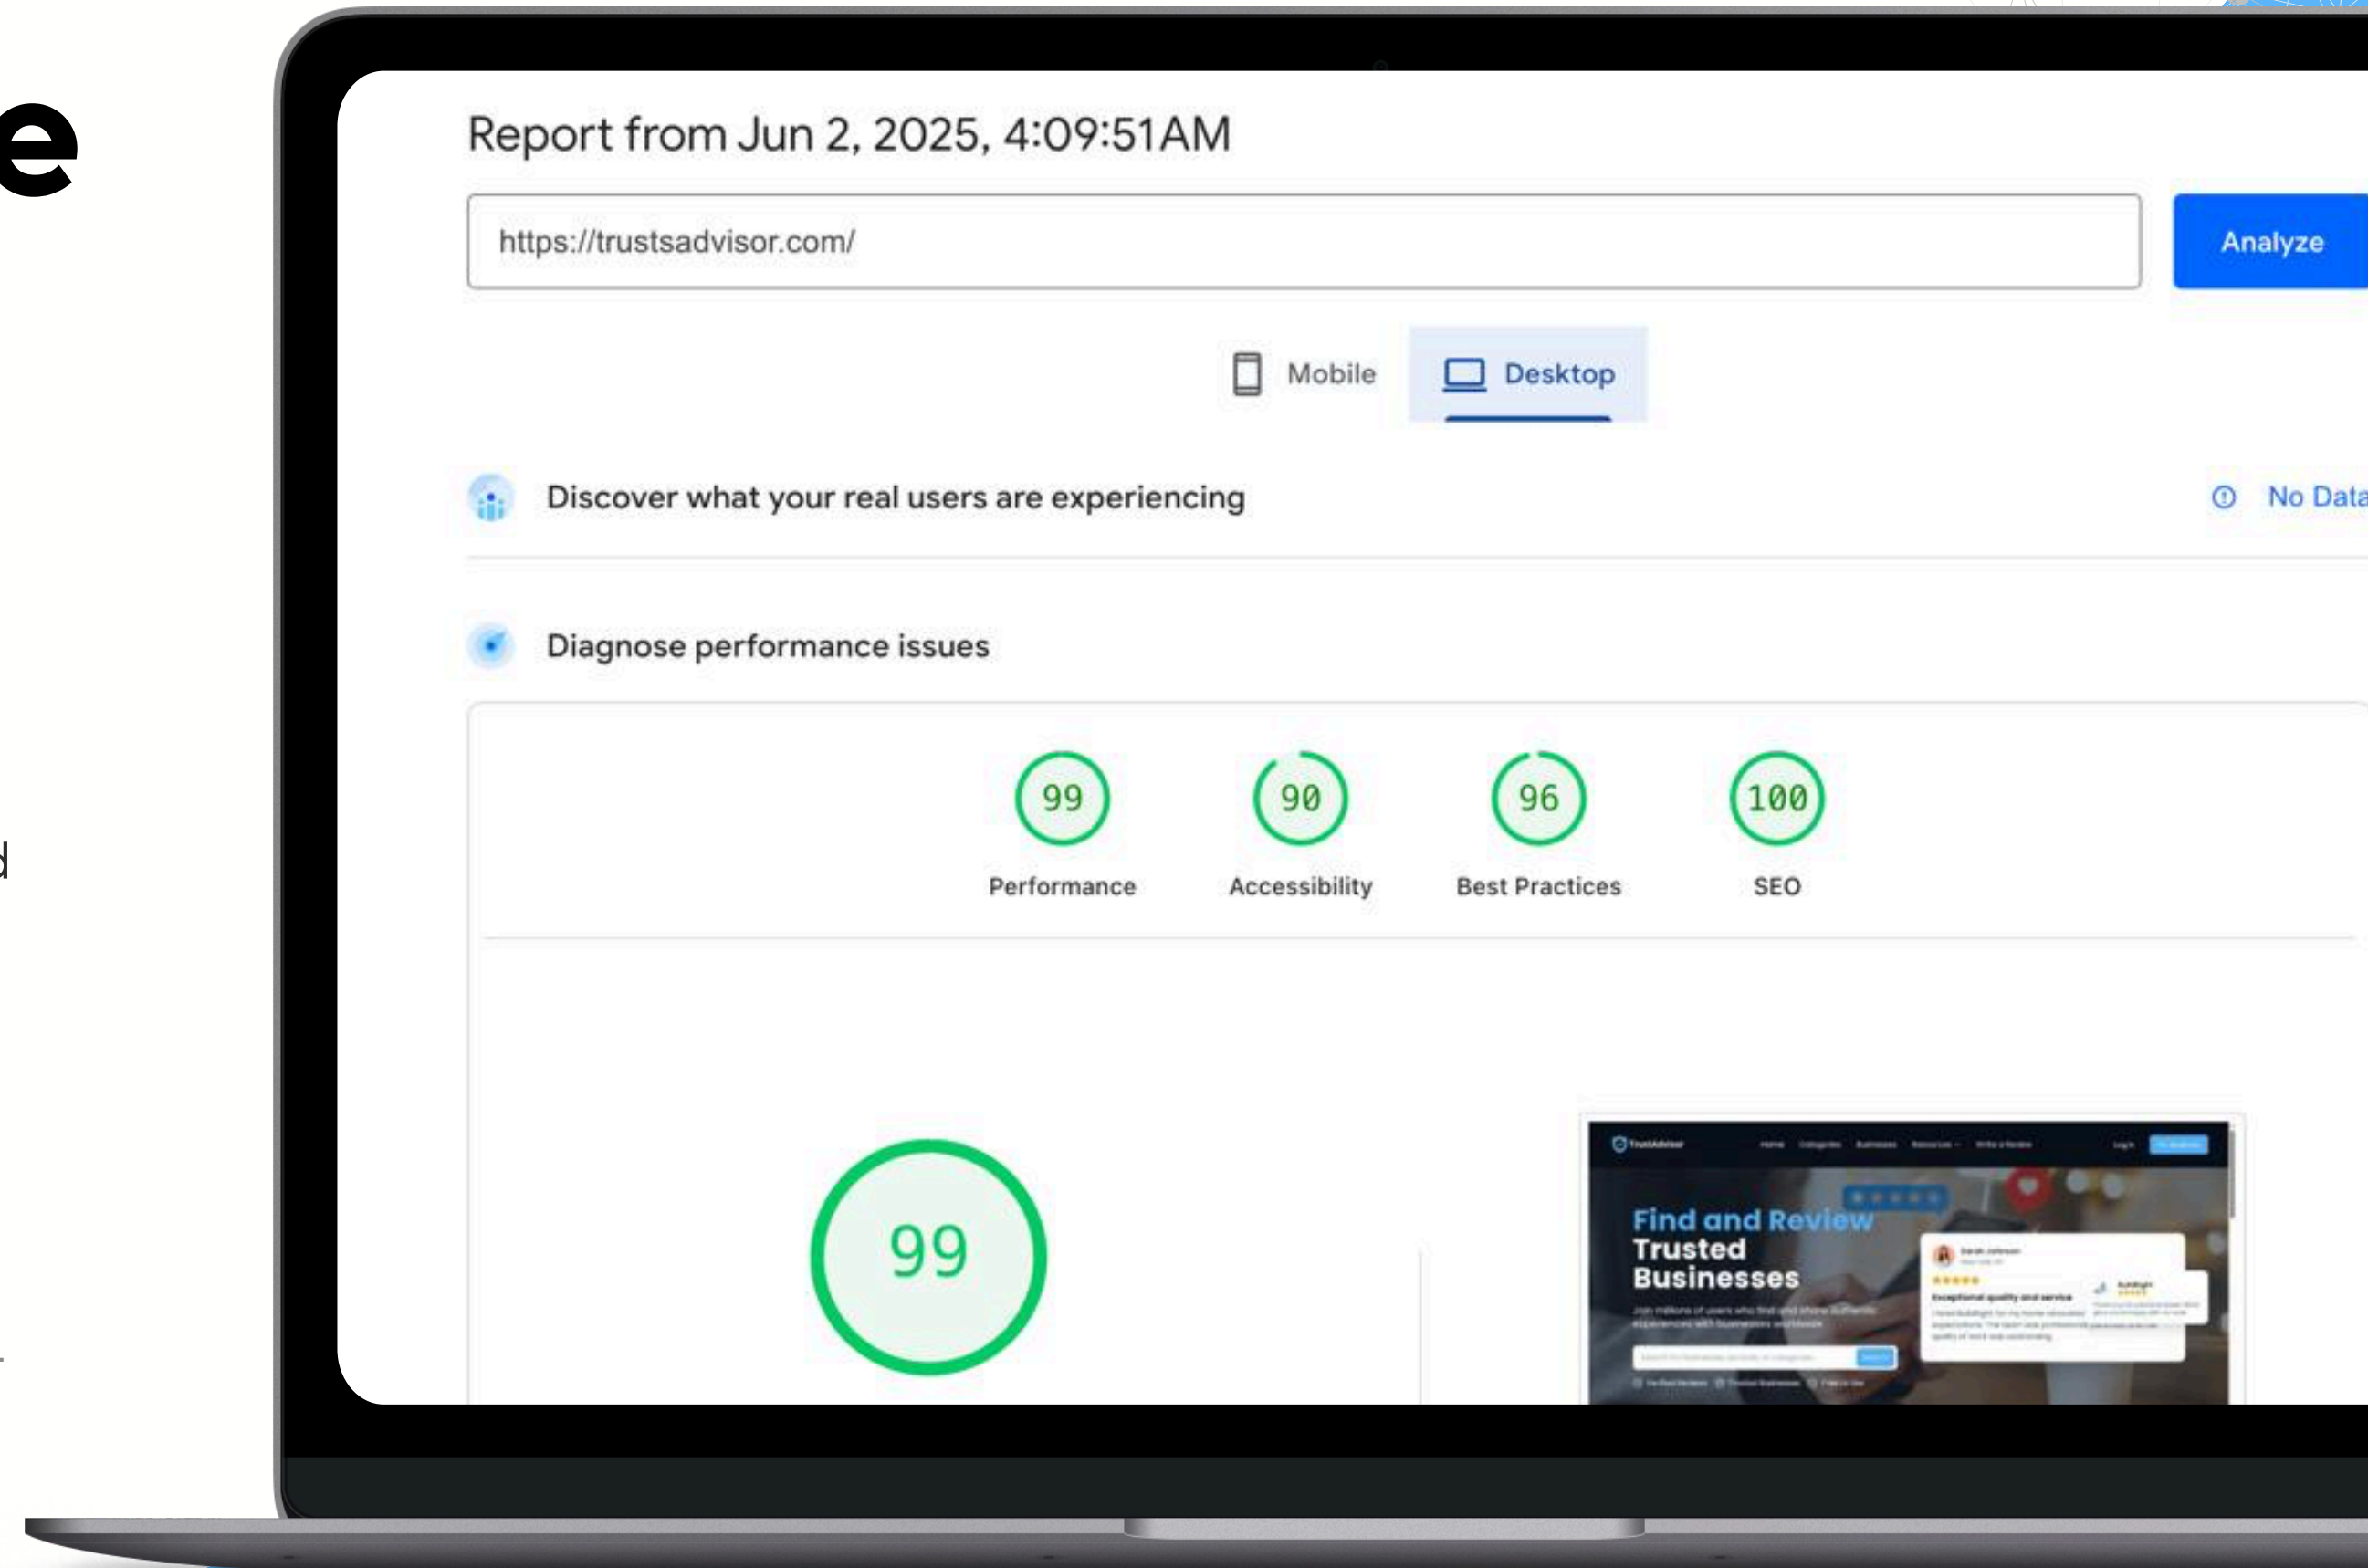

Performance Statistics

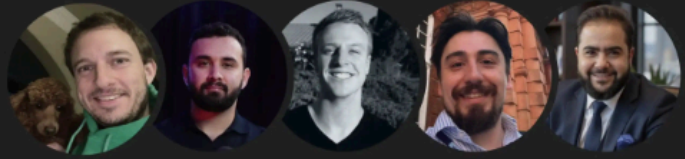

Checklist

- Code splitting and lazy loading
- img optimization (formats like WebP)
- Minification of CSS, JS, and HTML
- Gzip and Brotli compression enabled
- Caching strategies for static assets
- Reduced third-party script impact
- Used PageSpeed tools for tuning

● Tested with Page Speed

Got all greens on mobile and desktop, performance, SEO, Accessibility all up on 99.
